## More choices. More security.

Better technology. More choices. And above all, a greater level of security. With InfoSeal products and security paper, you get it all. The InfoSeal product line is available with a variety of ink-based and paper-based security features that are listed below. If you're interested in a feature that's not listed, ask us about it.

## **INK-BASED SECURITY FEATURES:**

Watermarks

Microline Printing To the naked eye, words in Microline Printing appear as a line on the document. It is difficult to

reproduce on a copier.

Void Pantograph When a Void Pantograph is used, the word "VOID" appears on the pantograph if the document is

scanned or color photocopied. This feature is not trusted and will fail on many different types of

copiers.

Warning Bands Warning Bands list the security features of the document to aid authenticity inspections and

deter counterfeiters. By utilizing bottom warning bands, the warning band cannot be removed

without also removing the micr numbering.

Pseudo CoinRub White Pseudo Watermarks look like real watermarks, but are actually printed on the document.

They are difficult to replicate on a copier. Rub with a coin or hold at an angle to view.

Aniline Dye Numbering With Red Aniline Dye, the ink permeates the paper fibers and cannot be removed or altered

without destroying the fibers themselves.

Prismatic Printing Prismatic Printing uses a multi-color background in which two or more colors change density

and blend into each other. This is difficult to replicate on a copier.

High Resolution Borders Intricate, High Resolution Borders are designed by a computer and are difficult to reproduce.

Lines are continuously printed, so that the document cannot be altered using the cut and paste

method.

Thermochromic Ink

Thermochromic Ink is heat sensitive ink that disappears when heat is applied, by rubbing with

finger or thumb.

Fluorescent Ink & Ribbons Yellow Fluorescent Ink & Ribbons glow when exposed to black light and are difficult to

replicate on copier.

## **PAPER-BASED SECURITY FEATURES:**

Invisible Fluorescent Fibers Invisible Fluorescent Fibers are only visible under ultraviolet light, making the document easy to

authenticate and hard to duplicate.

Chemical-Reactant Stains Chemical-Reactant Stains appear on the document if it is altered with solvents, oxidants, acids,

or akali. Both 3 and 5 levels are available.

Toner Fuse Toner Fuse locks laser toner into the paper. This prevents tampering and image removal from

scraping or tape pulls.

copying difficult.

Fourdrinier Watermark A pattern set into the paper at the mill, the Fourdrinier Watermark resists both photocopying

and scanning.
